Attorney Docket No.: 03-16 (444407-00083)

Amendment Page 2 of 8

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of claims:

1-4.6	[Cancell	led)

	5 (Comments Assess 1-1) The Color of City 1 A C 1 City
	5. (Currently Amended) The fuel system of claim 1, A fuel fill system comprising:
	a funnel having an inlet port configured to receive a nozzle from an external fuel
source;	
	a fuel filler tube coupled to an outlet port of the funnel; and
	a vapor recirculation tube coupled to the funnel, wherein fuel vapor from the
vapor r	ecirculation tube enters the funnel through a fuel vapor port, and the fuel vapor port
directs	the fuel vapor toward the outlet port;
	wherein the funnel includes a cylindrical portion through which the fuel vapor
port is	disposed, the fuel vapor port has a centerline disposed at a first angle less than 90° from a
<u>longitu</u>	dinal axis of the cylindrical portion; and

wherein, in a plane perpendicular to a longitudinal axis of the funnel, the fuel vapor port further directs the fuel vapor at a second angle less than 90° from a line tangent to an inner surface of the funnel at a point where fuel vapor enters the funnel.

- 6. (Original) The fuel fill system of claim 5, wherein the fuel vapor port has a centerline disposed at the second angle.
- 7. (Original) The fuel fill system of claim 5, wherein the second angle is between about 20° to about 70°.
- 8. (Original) The fuel fill system of claim 7, wherein the second angle is between about 30° to about 60°.
 - 9. (Original) A fuel fill system comprising:

a funnel having an inlet port configured to receive a nozzle from an external fuel source;

a fuel filler tube coupled to an outlet port of the funnel; and

a vapor recirculation tube coupled to the funnel, wherein, in a plane perpendicular to a longitudinal axis of the funnel, the fuel vapor entering the funnel from the vapor recirculation tube is directed at a first angle less than 90° from a line tangent to an inner surface of the funnel at a point where the fuel vapor enters a funnel.

10. (Original) The fuel fill system of claim 9, further comprising:

a fuel vapor port disposed through the funnel and in fluid communication with the vapor recirculation tube, the fuel vapor port having a centerline disposed at the first angle.

- 11. (Original) The fuel fill system of claim 10, wherein the centerline of the fuel vapor port is further disposed at a second angle less than 90° from the longitudinal axis of the funnel to direct the fuel vapor toward the outlet port.
- 12. (Original) The fuel fill system of claim 11, wherein each of the first and second angles is between about 20° to about 70°.
- 13. (Original) The fuel fill system of claim 12, wherein each of the first and second angles is between about 30° to about 60°.

14-17 (Cancelled)

18	. (Currently amended) The funnel of claim 14, A funnel for a fuel full system, the
funnel cor	nprising:
	an inlet port configured to receive a nozzle from an external fuel source;
	an outlet port through which fuel from the nozzle passes to a fuel filler tube; and
	a fuel vapor port configured to direct fuel vapor entering the funnel towards the
outlet port	•

wherein the fuel vapor port has a centerline disposed at a first angle less than 90° from a longitudinal axis of the funnel; and

wherein the fuel vapor port is further configured to direct the fuel vapor entering the funnel at a second angle less than 90° from a line tangent to an inner surface of the funnel at a point where the fuel vapor enters the funnel, the angle being in a plane perpendicular to the longitudinal axis of the funnel.

- 19. (Original) The funnel of claim 18, wherein the second angle is between about 20° to about 70°.
- 20. (Original) The funnel of claim 19, wherein the second angle is between about 30° to about 60°.
- 21. (Original) A funnel for a fuel fill system, the funnel comprising:

 an inlet port configured to receive a nozzle from an external fuel source;

 an outlet port through which fuel from the nozzle passes to a fuel filler tube; and

 a fuel vapor port configured to direct fuel vapor entering the funnel at a first angle
 less than 90° from a line tangent to an inner surface of the funnel at a point where the fuel vapor
 enters the funnel, the angle being in a plane perpendicular to a longitudinal axis of the funnel.
- 22. (Original) The funnel of claim 21, wherein the fuel vapor port has a centerline disposed at the first angle.
- 23. (Original) The funnel of claim 22, wherein the centerline of the fuel vapor port is further disposed at a second angle less than 90° from the longitudinal axis of the funnel to direct the fuel vapor entering the funnel toward the outlet port.
- 24. (Original) The funnel of claim 23, wherein each of the first and second angles is between about 20° to about 70°.
